

# Supporting our clients towards sustainable aviation

## Transition to Net Zero Economy

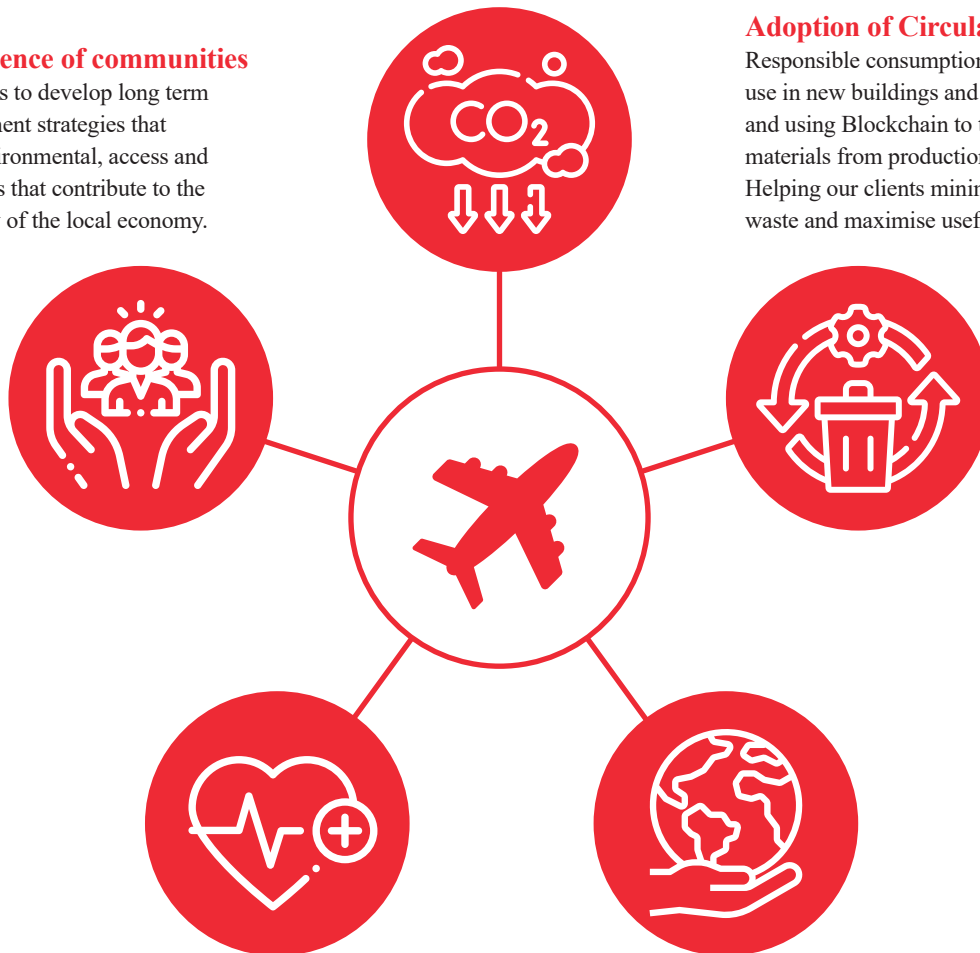

Energy master planning, combining building energy, operational analysis and renewable technologies to help our clients achieve net zero.

## Enhancing resilience of communities

Supporting our clients to develop long term sustainable development strategies that encourage wider environmental, access and community initiatives that contribute to the growth and longevity of the local economy.

## Adoption of Circular Economy

Responsible consumption to minimise materials use in new buildings and refurbishment projects and using Blockchain to track lifecycle of materials from production to reuse or recycle. Helping our clients minimise costs, minimise waste and maximise usefulness of materials.

## Improving Health & Wellbeing

Focussing on designing user-centric infrastructure and improving operations to benefit passengers and employees, inclusive environments for differing physical and psychological needs.

## Respecting planetary boundaries

Helping our clients develop ecological, restorative plans and vegetation management to improve our planet.
