Asset Management

AeroCloud

## Simplify the process of managing your airport's assets.

AeroCloud's Asset Management module allows you to manage and track the status of all your airport assets and consumables.

Built cloud-native, there are no associated hardware costs or individual user licenses required, saving you money and improving the visibility of outstanding repair work across your whole airport. The Asset Management module is designed to be a stand alone product or can be integrated into AeroCloud's Inspection Management module.

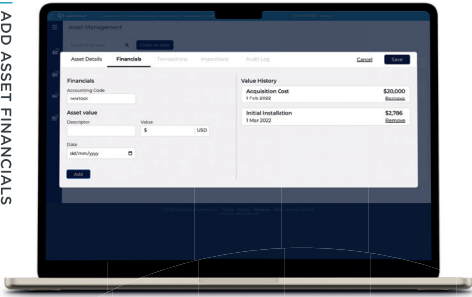

ASSET INVENTORY

CREATE A NEW ASSET

## CHALLENGES WITH AIRPORT ASSET MANAGEMENT

- Asset inventory record keeping can be inaccurate and cumbersome

- Location management doesn't represent true position in terminal or airfield areas

- Little visibility into the history of asset repair and replacement

- Poor communication of asset repair status

- Unable to understand trends of regular failing assets

- Poor flnancial tracking and depreciation management

- Updates and information do not transfer over between disparate airfield inspections management tools, creating a silo between Operations and Maintenance teams

HOW DOES AEROCLOUD SOLVE THESE CHALLENGES?

- Simplify asset inventory record keeping
- Quickly locate assets within the platform with clear visualization and pinpoint accuracy
- Increase transparency with highly visible asset repair statuses
- View and seamlessly manage asset repair records

- Take control of your procurement strategy and easily track your order and maintenance expenditure
- Merge operations and maintenance communications and workflows, which translates to shorter repair lead time and better use of human resources

| INSPECTIONS MANAGEMENT

ALSO AVAILABLE: INSPECTIONS MANAGEMENT

The Asset Management module is a standalone product but integrates seamlessly into AeroCloud's Inspection Management module. With Inspections Management, you can keep track of all regulatory, safety, and maintenance inspections and service requests. Ask an Airport Engagement Officer about the combined power of AeroCloud's Inspections Management and Asset Management modules.
